Typescript, React, React Native

NextJS, SCSS, NodeJS, Redux

Socket.io, Gulp

NodeJS, ExpressJS

MongoDB, Mongoose

## PROFILE

I am a passionate web developer, hardworking, very easy to adapt to any situation, eager to learn more and be apart of a team, while bringing forth a motivated attitude and a variety of powerful skills.

## COMPETITIONS

### Third Place in the FIICode 2022 Coding Competition (Web Development Section)

Iași

Mar 2022 — May 2022

FIICode is a project organized by ASII (Asociația Studenților Informaticieni Iași) and the Faculty of Informatics Iași, which is based on the development of skills in competitive programming.

I participated in this competition alone; a team could have had a maximum of 3 people. The first stage was a 2-month-long full stack project (available on the personal site). After qualifying for the final stage, I took part in a 24h hackathon, in which I also had to do a full stack project and a mobile application (also available on the personal site). In the end, I managed to get third place, which was a remarkable thing for me, to say the least.

## INTERNSHIPS

### Fullstack Intern Web Developer, Stellar Development SRL

Iași

Jun 2022 — Aug 2022

I was apart of a 5 men team, all of us interns, supervised by two web developers, in which we had individual projects and projects that included all of us.

## LANGUAGES

---

English

Romanian

German

## HOBBIES

---

Cycling, series & movies,  
swimming

I had, at the same time, the possibility to coordinate, with the help of the supervisors, the other 4 people and manage them through Trello, since I had prior knowledge about web development, frontend and backend.

The biggest project consisted in implementing 4 websites (done by the other 4 interns) into a chatting mobile application done fully by me (in React Native), including the server (in NodeJS, Express). At the same time, the application was a chatting application, so you could have friends, block them, talk to them etc. (link to live demo in my website), and you could see your profile, which included data taken from the other 4 websites,

Other projects included a weather site (done individually) and a chatting website, with features similar in the React Native application, done only by me, including the server.
